

Stainless steel grenade shape nozzles, wear resistant.

Ceramic inserts offer high and long lasting performance. Thanks to external hexagonal heads, inserts are easy to remove for service and replacement.

30° inclination makes the water jets efficient in order to clean the pipe walls, rather than jets with lower inclination.

A deviator set inside the nozzle maximizes flow efficiency reducing pressure drop.

	3/8" F	1/2" F	3/4" F	1" F	1" 1/4

Applications

- General cleaning operation in sewer and canalization.
- Frequent use in concrete pipes.
- Cleaning operations before CCTV inspections and root cutting with chain rotating nozzles.
